安装步骤

假设现在刚刚装好VMWare

- 1. 打开Ubuntu Software安装一个GoLand(用其他IDE也可以)
- 2. 打开工作文件夹(这里假定为/home/go), 右键open in terminal, 输入

```
sudo apt-get install git
sudo apt-get install golang-go
git clone https://github.com/xmhuangzhen/DHT-2021.git
cd DHT-2021
export GO111MODULE=on
export GOPROXY=https://goproxy.io
go get -u -v github.com/fatih/color
cd src
cd main
go build main
```

3. 结果是

```
dht@ubuntu:~/go/DHT-2021/src/main$ go build main
# main
./userdef.go:9:1: missing return at end of function
```

- 4. 写完build成功,不会有任何提示
- 5. 接着运行

```
./main -test basic
```

或者

```
./main -test advance
```

或者

```
./main -test all
```
